&

Department of Economics

**University of Calcutta,
56A, B.T. Road, Kolkata - 700050
(www.econcaluniv.ac.in)**

CONCEPT NOTE

West Bengal is bestowed with 56 lakh ha. of cultivable land of which 62% area is irrigated and spread across six agro climatic zones. The state grows variety of fruits and vegetables. The state is having a significant production of fish, potato, rice, maize, sugarcane, pineapple, banana, flowers, shrimp, Jute, meat and dairy products. Department of agriculture takes a proactive role in providing various incentives to promote higher productivity. Some of the markets like at Siliguri, are located in strategic nodal points, to cater to Nepal, Sikkim, Myanmar and Bangladesh. Such markets should be developed as International markets with modern amenities and infrastructure both to export raw and processed produce. The contribution of agriculture to the state GDP should be increased by improving the cropping patterns, increasing market network and evolving strategies to integrate the domestic and markets of neighbouring countries. There is enough crop diversification existing in the state which should aim at demand led production. Market led production should be promoted for selected commodities on cluster basis to fetch better income to the farmers. In order to modernise the trading practices, the state has introduced single point license to the traders dealing with agricultural produce facilitating them to trade across the state. Similarly, e-permit facility is created for the farm produce to improve the supply chain system. Crops like pineapple, lychee, mango, vegetables etc supported by AEZ project in the state. Efficient marketing for both raw and processed farm produce is necessary to augment the income of the state. Since 1992, Department of Food Processing Industries has been encouraging the production of value added food crops in the state. Variety of spices such as chilies, large cardamom, ginger, turmeric, garlic, coriander, tej patha etc. are gaining significant share in the market. Cinchona, Ipeac roots, chrota, Darjeeling mandarin etc, are the other important high value products. West Bengal ranks the highest in meat production, especially back goat meat. The state has 3 lakh Mts. of poultry products. Orchids of the state are exported to may domestic and overseas markets. In order to encourage processing, FPOs should be established and encouraged with necessary capital and managerial support. On cluster basis, hand holding is to be given to the identified FPOs having specific business models. The processed produce should be supported by grading, packing, storing and transporting infrastructure. Under NABARD and MSME supported schemes, the skill development trainings should be given to the FPOs. In districts like Hooghly, Nadia Burdwan, Mursidabad, 24 Parganas (N & S), Howrah, Midnapore (East), Midnapore (West), Bankura, Birbhum, Purulia and Hill and Terai Zone, variety of medicinal plants are available. Value addition by processing of these products will fetch

good revenue to the state if marketed effectively. In the rural and remote areas, with cost effective primary processing units should be established and encourage the FPOs and SHGs to operate them. Such units should be federated at district and state level to aggregate the processed produce and market them. In this context, state map, indicating the potential products, area and their economic importance will help the state to draw a comprehensive policy for agribusiness in the state. With this background the paper writers may focus on the potential of agri-horticultural produce, livestock and forest produce and their value addition, economic benefits in West Bengal. Paper writers may also examine the issues related to the infrastructure, technology and policy issues related to agro-processing to augment agribusiness in West Bengal.

Guide lines for Paper Writers:

- a. Papers should be original in their findings and prepared exclusively for the seminar.
- b. Papers should not normally exceed ten pages , typed in double space on one side of A- 4 size paper.
- c. All papers should contain a summary, strictly not more than in 200 words.
- d. Papers should bear the title below which name and addresses of the authors. All text/figures / graphs should be in black and white.
